

Actionable Audit Report Summary

Audited source1: Massive

Comparison source2: yFinance

ticker	date	source1 fix priority	event bucket	analysis reason code	real world evidence	source1 problem and fix	source1 div split	source2 div split	source1 return	source2 return
BDX	2022-04-01	HIGH	SPINOFF	SOURCE1_MISSING_EVENT	BD spin-off of embecta Corp. with one embecta share distributed for every five BD shares. BD's SEC filing states that on 04/01/2022 BD completed the spin-off of its Diabetes Care business as embecta, distributing one embecta share for every five BD shares outstanding as of the 03/22/2022 record date, and embecta's release confirms it completed the spin-off and began trading on Nasdaq on 04/01/2022. The input row math supports source2: source1_return is -0.013158, source2_return is 0.011513, and diff_return is -0.024671, meaning source1 is lower by about 246.7 bp. source1_div_split is blank, source2_div_split is sp:1.025, has_div_split_mismatch is true, source1_div_split_factor_explicit is 1.0, and source2_div_split_factor_explicit is 1.025. The expected return impact of about +0.025 from the spin-off marker reconciles to the negative diff_return when source1 omits the event, so source2 captures the economic spin-off adjustment and source1 appears to be missing it.	source1 is missing the event/adjustment needed to explain the return difference. source1 appears incorrect because source2 and real-world event evidence support an event/adjustment that source1 did not capture. Add or correct the missing source1 dividend/split event, apply the appropriate adjustment factor, and rebuild the adjusted close and adjusted return chain.		sp:1.025	-0.013158	0.011513
BDX	2026-02-10	HIGH	SPINOFF	SOURCE1_MISSING_EVENT	BD spin-off of Biosciences & Diagnostic Solutions and combination with Waters Corporation. BD announced a February 2026 record date and expected closing for the spin-off of its Biosciences & Diagnostic Solutions business and combination with Waters, stating that BD shareholders would receive Waters common stock and that BD's share price should adjust after close. BD's subsequent 10-Q confirms that on 02/09/2026 BD completed the spin-off and Reverse Morris Trust combination with Waters, with BD shareholders receiving Waters common stock representing 39.2% of the combined company. The input row math supports source2: source1_return is -0.172188, source2_return is 0.052977, and diff_return is -0.225165, meaning source1 is lower by about 225.2 bp. source1_div_split is blank, source2_div_split is sp:1.272, has_div_split_mismatch is true, source1_div_split_factor_explicit is 1.0, and source2_div_split_factor_explicit is 1.272. The source2 spin-off marker represents a large positive event-return adjustment that explains why source2's adjusted return is materially higher; source1 omits the event adjustment and therefore appears economically incomplete.	source1 is missing the event/adjustment needed to explain the return difference. source1 appears incorrect because source2 and real-world event evidence support an event/adjustment that source1 did not capture. Add or correct the missing source1 dividend/split event, apply the appropriate adjustment factor, and rebuild the adjusted close and adjusted return chain.		sp:1.272	-0.172188	0.052977
BWA	2023-07-05	HIGH	SPINOFF	SOURCE1_MISSING_EVENT	BorgWarner spin-off of PHINIA Inc. with PHINIA beginning NYSE trading on 07/05/2023. BorgWarner announced completion of the PHINIA spin-off on 07/03/2023, and PHINIA independently announced it began NYSE trading on 07/05/2023	source1 is missing the event/adjustment needed to explain the return difference. source1 appears incorrect because source2 and real-world event		sp:1.136	-0.135016	-0.017378

ticker	date	source1 fix priority	event bucket	analysis reason code	real world evidence	source1 problem and fix	source1 div split	source2 div split	source1 return	source2 return
					following separation from BorgWarner. A MIAX corporate-action notice identifies the ex-distribution date as 07/05/2023 and a distribution ratio of 0.2 PHIN share per BWA share. The input row math supports source2: source1_return is -0.135016, source2_return is -0.017378, and diff_return is -0.117638, meaning source1 is lower by about 1176.4 bp. source1_div_split is blank, source2_div_split is sp:1.136, has_div_split_mismatch is true, source1_div_split_factor_explicit is 1.0, and source2_div_split_factor_explicit is 1.136. The source2 spin-off marker gives an expected return impact of about +0.136 and explains why source2's adjusted return is materially higher; source1 omits the PHINIA distribution adjustment.	evidence support an event/adjustment that source1 did not capture. Add or correct the missing source1 dividend/split event, apply the appropriate adjustment factor, and rebuild the adjusted close and adjusted return chain.				
CF	2024-05-14	HIGH	DISTRIBUTION	SOURCE1_MISSING_EVENT	CF Industries \$0.50 quarterly cash dividend with 05/14/2024 ex-dividend date. CF Industries' 2024 annual report states that in each quarter of 2024 a \$0.50 common-share dividend was declared and paid, and StockAnalysis independently lists a \$0.500 dividend with 05/14/2024 ex-dividend date, 05/15/2024 record date, and 05/31/2024 pay date. The input row math supports source2: source1_return is 0.001616, source2_return is 0.008405, and diff_return is -0.006789, meaning source1 is lower by about 67.9 bp. source1_div_split is blank, source2_div_split is ca:0.5, has_div_split_mismatch is true, source1_div_split_factor_explicit is 1.0, source2_div_split_factor_explicit is 1.006733, and source2_div_split_factor_implied is 1.006779. The expected return impact of about +0.006733 from the \$0.50 cash dividend reconciles to the negative diff_return when source1 omits the dividend adjustment, so source2 captures the real distribution and source1 appears to be missing it.	source1 is missing the event/adjustment needed to explain the return difference. source1 appears incorrect because source2 and real-world event evidence support an event/adjustment that source1 did not capture. Add or correct the missing source1 dividend/split event, apply the appropriate adjustment factor, and rebuild the adjusted close and adjusted return chain.		ca:0.5	0.001616	0.008405
CMCSA	2026-01-05	HIGH	SPINOFF	SOURCE1_MISSING_EVENT	Comcast spin-off of Versant Media Group, with Versant beginning Nasdaq trading as an independent company. Comcast announced completion of the Versant Media Group separation effective 01/02/2026, with Comcast shareholders receiving one Versant share for every 25 Comcast shares held on the 12/16/2025 record date, and Nasdaq carried the same completion and distribution details. The input row math supports source2: source1_return is -0.047732, source2_return is 0.016070, and diff_return is -0.063802, meaning source1 is lower by about 638.0 bp. source1_div_split is blank, source2_div_split is sp:1.067, has_div_split_mismatch is true, source1_div_split_factor_explicit is 1.0, and source2_div_split_factor_explicit is 1.067. The expected return impact of about +0.067 from the spin-off marker reconciles to the negative diff_return when source1 omits the Versant distribution adjustment, so source2	source1 is missing the event/adjustment needed to explain the return difference. source1 appears incorrect because source2 and real-world event evidence support an event/adjustment that source1 did not capture. Add or correct the missing source1 dividend/split event, apply the appropriate adjustment factor, and rebuild the adjusted close and adjusted return chain.		sp:1.067	-0.047732	0.01607

ticker	date	source1 fix priority	event bucket	analysis reason code	real world evidence	source1 problem and fix	source1 div split	source2 div split	source1 return	source2 return
					captures the economic spin-off and source1 appears to be missing it.					
DHR	2023-10-02	HIGH	SPINOFF	SOURCE1_MISSING_EVENT	Danaher spin-off of Veralto Corporation with regular-way Veralto trading beginning 10/02/2023. Danaher announced the Veralto pro rata stock dividend and said regular-way Veralto trading was expected to begin on the NYSE on 10/02/2023. OCC memo 53275 independently describes the Danaher distribution and indicates an October 2, 2023 adjustment with 100 Danaher shares receiving 33 Veralto shares, economically consistent with one Veralto share for roughly every three Danaher shares. The input row math supports source2: source1_return is -0.138493, source2_return is -0.028220, and diff_return is -0.110273, meaning source1 is lower by about 1102.7 bp. source1_div_split is blank, source2_div_split is sp:1.128, has_div_split_mismatch is true, source1_div_split_factor_explicit is 1.0, and source2_div_split_factor_explicit is 1.128. The source2 spin-off marker gives an expected return impact of about +0.128 and explains why source2's adjusted return is materially higher; source1 omits the Veralto distribution adjustment.	source1 is missing the event/adjustment needed to explain the return difference. source1 appears incorrect because source2 and real-world event evidence support an event/adjustment that source1 did not capture. Add or correct the missing source1 dividend/split event, apply the appropriate adjustment factor, and rebuild the adjusted close and adjusted return chain.		sp:1.128	-0.138493	-0.02822
ED	2024-05-14	HIGH	DISTRIBUTION	SOURCE1_MISSING_EVENT	Consolidated Edison \$0.83 quarterly cash dividend with 05/14/2024 ex-dividend date. StockAnalysis lists Consolidated Edison with a \$0.830 dividend on 05/14/2024, record date 05/15/2024, and pay date 06/14/2024, and TipRanks independently lists the same \$0.83 quarterly dividend with 05/14/2024 ex-dividend date, 05/15/2024 record date, and 06/14/2024 payment date. The input row math supports source2: source1_return is -0.010242, source2_return is -0.001756, and diff_return is -0.008486, meaning source1 is lower by about 84.9 bp. source1_div_split is blank, source2_div_split is ca:0.83, has_div_split_mismatch is true, source1_div_split_factor_explicit is 1.0, source2_div_split_factor_explicit is 1.008501, and source2_div_split_factor_implied is 1.008573. The expected return impact of about +0.008501 from the \$0.83 cash dividend reconciles to the negative diff_return when source1 omits the dividend adjustment, so source2 captures the real cash distribution and source1 appears to be missing it.	source1 is missing the event/adjustment needed to explain the return difference. source1 appears incorrect because source2 and real-world event evidence support an event/adjustment that source1 did not capture. Add or correct the missing source1 dividend/split event, apply the appropriate adjustment factor, and rebuild the adjusted close and adjusted return chain.		ca:0.83	-0.010242	-0.001756
ETN	2025-11-05	HIGH	DISTRIBUTION	SOURCE1_EVENT_DATE_MISMATCH	Eaton \$1.04 quarterly cash dividend with 11/05/2025 ex-dividend date and 11/06/2025 record date. Eaton announced a \$1.04 quarterly dividend payable 11/21/2025 to shareholders of record on 11/06/2025, and StreetInsider independently lists the \$1.04 dividend with 11/05/2025 ex-dividend date, 11/06/2025 record date, and 11/21/2025 payment date. The input row math supports source2's ex-date treatment: source1_return is 0.020438, source2_return is 0.023256, and diff_return	source1 appears to have the correct event amount on the wrong trading date. source1 appears incorrect because the real-world event date and return math indicate the event should be recognized on a different trading date.		ca:1.04	0.020438	0.023256

ticker	date	source1 fix priority	event bucket	analysis reason code	real world evidence	source1 problem and fix	source1 div split	source2 div split	source1 return	source2 return
					is -0.002817, meaning source1 is lower by about 28.2 bp. source1_div_split is blank, source2_div_split is ca:1.04, has_div_split_mismatch is true, source1_div_split_factor_explicit is 1.0, source2_div_split_factor_explicit is 1.002753, and source2_div_split_factor_implied is 1.002761. The expected return impact of about +0.002753 from the \$1.04 cash dividend reconciles to the negative diff_return when source1 omits the event on the ex-dividend date, so source2 uses the economically correct event date.	Move the source1 dividend/split event to the externally confirmed event date, remove the misstated adjacent-date event if present, and rebuild the adjusted close and adjusted return chain.				
ETN	2025-11-06	HIGH	DISTRIBUTION	SOURCE1_EVENT_DATE_MISMATCH	Eaton \$1.04 quarterly cash dividend recorded by source1 one trading day after the true ex-dividend date. Eaton announced a \$1.04 quarterly dividend payable 11/21/2025 to shareholders of record on 11/06/2025, and StreetInsider independently lists the actual ex-dividend date as 11/05/2025 with 11/06/2025 record date. The input row math shows source1 has shifted the same event one trading day late: source1_return is -0.018210, source2_return is -0.020859, and diff_return is +0.002649, meaning source1 is higher by about 26.5 bp on the day after the true ex-date. source1_div_split is cd:1.04, source2_div_split is blank, has_div_split_mismatch is true, source1_div_split_factor_explicit is 1.002698, and source2_div_split_factor_explicit is 1.0. Because the real dividend belongs to the 11/05/2025 ex-date rather than 11/06/2025, source2's absence of an event on 11/06/2025 is economically correct and source1 appears to have the correct amount on the wrong trading date.	source1 appears to have the correct event amount on the wrong trading date. source1 appears incorrect because the real-world event date and return math indicate the event should be recognized on a different trading date. Move the source1 dividend/split event to the externally confirmed event date, remove the misstated adjacent-date event if present, and rebuild the adjusted close and adjusted return chain.	cd:1.04		-0.01821	-0.020859
EXC	2022-02-02	HIGH	SPINOFF	SOURCE1_MISSING_EVENT	Exelon spin-off of Constellation Energy with one Constellation share for every three Exelon shares. Nasdaq Trader's corporate-action alert says Exelon announced the Constellation Energy spin-off with an ex-date of 02/02/2022, and Constellation's investor FAQ confirms Exelon shareholders received one Constellation share for every three Exelon shares held on the record date. Investing.com also reported Exelon traded sharply lower as the Constellation separation took effect. The input row math supports source2: source1_return is -0.258862, source2_return is 0.039075, and diff_return is -0.297937, meaning source1 is lower by about 2979.4 bp. source1_div_split is blank, source2_div_split is sp:1.402, has_div_split_mismatch is true, source1_div_split_factor_explicit is 1.0, and source2_div_split_factor_explicit is 1.402. The source2 spin-off marker gives an expected return impact of about +0.402 and explains why source2's adjusted return is materially higher; source1 omits the Constellation distribution adjustment.	source1 is missing the event/adjustment needed to explain the return difference. source1 appears incorrect because source2 and real-world event evidence support an event/adjustment that source1 did not capture. Add or correct the missing source1 dividend/split event, apply the appropriate adjustment factor, and rebuild the adjusted close and adjusted return chain.		sp:1.402	-0.258862	0.039075
FCX	2022-10-13	HIGH	DISTRIBUTION	SOURCE1_PARTIAL_EVENT	Freeport-McMoRan \$0.15 cash dividend made up of \$0.075 base plus \$0.075 variable dividend. StockAnalysis lists Freeport-McMoRan's 10/13/2022	source1 records a corporate-action event, but the event amount appears incomplete.	cd:0.075	ca:0.15	0.020685	0.023353

ticker	date	source1 fix priority	event bucket	analysis reason code	real world evidence	source1 problem and fix	source1 div split	source2 div split	source1 return	source2 return
					dividend as \$0.150, and FCX's annual-report discussion confirms its dividend framework includes a \$0.075 base dividend plus a \$0.075 variable performance-based dividend. The input row math supports source2: source1_return is 0.020685, source2_return is 0.023353, and diff_return is -0.002668. source1_div_split is cd:0.075, source2_div_split is ca:0.15, has_div_split_mismatch is true, source1_div_split_factor_explicit is 1.002601, and source2_div_split_factor_explicit is 1.005201. The missing \$0.075 component explains the negative diff_return, so source2 captures the full cash distribution while source1 captures only half.	source1 appears incorrect because it captured only part of the same-day corporate-action event, and the missing event-return piece explains the source1/source2 return difference. Correct the source1 event amount to include the full corporate-action distribution, then rebuild the adjusted close and adjusted return chain.				
FCX	2023-01-12	HIGH	DISTRIBUTION	SOURCE1_PARTIAL_EVENT	Freeport-McMoRan \$0.15 cash dividend made up of \$0.075 base plus \$0.075 variable dividend.	source1 records a corporate-action event, but the event amount appears incomplete.	cd:0.075	ca:0.15	-0.003205	-0.00155
					StockAnalysis lists Freeport-McMoRan's 01/12/2023 dividend as \$0.150, and FCX's annual-report discussion confirms quarterly cash dividends totaling \$0.15 per share, including \$0.075 base and \$0.075 variable components. The input row math supports source2: source1_return is -0.003205, source2_return is -0.001550, and diff_return is -0.001655. source1_div_split is cd:0.075, source2_div_split is ca:0.15, has_div_split_mismatch is true, source1_div_split_factor_explicit is 1.001655, and source2_div_split_factor_explicit is 1.003310. The missing \$0.075 component explains the negative diff_return, so source2 captures the full cash distribution while source1 captures only half.	source1 appears incorrect because it captured only part of the same-day corporate-action event, and the missing event-return piece explains the source1/source2 return difference. Correct the source1 event amount to include the full corporate-action distribution, then rebuild the adjusted close and adjusted return chain.				
FCX	2023-04-13	HIGH	DISTRIBUTION	SOURCE1_PARTIAL_EVENT	Freeport-McMoRan \$0.15 cash dividend; source1 captures only \$0.075.	source1 records a corporate-action event, but the event amount appears incomplete.	cd:0.075	ca:0.15	0.046412	0.048328
					StockAnalysis and CompaniesMarketCap both list Freeport-McMoRan's 04/13/2023 dividend as \$0.150. The input row math supports source2: source1_return is 0.046412, source2_return is 0.048328, and diff_return is -0.001916. source1_div_split is cd:0.075, source2_div_split is ca:0.15, has_div_split_mismatch is true, source1_div_split_factor_explicit is 1.001824, and source2_div_split_factor_explicit is 1.003648. The missing \$0.075 component explains the negative diff_return, so source2 captures the full cash distribution while source1 captures only half.	source1 appears incorrect because it captured only part of the same-day corporate-action event, and the missing event-return piece explains the source1/source2 return difference. Correct the source1 event amount to include the full corporate-action distribution, then rebuild the adjusted close and adjusted return chain.				
FCX	2023-07-13	HIGH	DISTRIBUTION	SOURCE1_PARTIAL_EVENT	Freeport-McMoRan \$0.15 cash dividend; source1 captures only \$0.075.	source1 records a corporate-action event, but the event amount appears incomplete.	cd:0.075	ca:0.15	0.035306	0.03722
					StockAnalysis and CompaniesMarketCap both list Freeport-McMoRan's 07/13/2023 dividend as \$0.150. The input row math supports source2: source1_return is 0.035306, source2_return is 0.037220, and diff_return is -0.001914. source1_div_split is cd:0.075, source2_div_split is ca:0.15, has_div_split_mismatch is true, source1_div_split_factor_explicit is 1.001842, and	source1 appears incorrect because it captured only part of the same-day corporate-action event, and the missing event-return piece explains the source1/source2 return difference.				

ticker	date	source1 fix priority	event bucket	analysis reason code	real world evidence	source1 problem and fix	source1 div split	source2 div split	source1 return	source2 return
					source2_div_split_factor_explicit is 1.003684. The missing \$0.075 component explains the negative diff_return, so source2 captures the full cash distribution while source1 captures only half.	Correct the source1 event amount to include the full corporate-action distribution, then rebuild the adjusted close and adjusted return chain.				
FCX	2023-10-12	HIGH	DISTRIBUTION	SOURCE1_PARTIAL_EVENT	Freeport-McMoRan \$0.15 cash dividend; source1 captures only \$0.075. StockAnalysis and CompaniesMarketCap both list Freeport-McMoRan's 10/12/2023 dividend as \$0.150. The input row math supports source2: source1_return is -0.027107, source2_return is -0.025135, and diff_return is -0.001972. source1_div_split is cd:0.075, source2_div_split is ca:0.15, has_div_split_mismatch is true, source1_div_split_factor_explicit is 1.002019, and source2_div_split_factor_explicit is 1.004038. The missing \$0.075 component explains the negative diff_return, so source2 captures the full cash distribution while source1 captures only half.	source1 records a corporate-action event, but the event amount appears incomplete. source1 appears incorrect because it captured only part of the same-day corporate-action event, and the missing event-return piece explains the source1/source2 return difference. Correct the source1 event amount to include the full corporate-action distribution, then rebuild the adjusted close and adjusted return chain.	cd:0.075	ca:0.15	-0.027107	-0.025135
FCX	2024-01-11	HIGH	DISTRIBUTION	SOURCE1_PARTIAL_EVENT	Freeport-McMoRan \$0.15 cash dividend made up of \$0.075 base plus \$0.075 variable dividend. StockAnalysis lists Freeport-McMoRan's 01/11/2024 dividend as \$0.150, and a contemporaneous release repost noted FCX declared \$0.15 per share made up of a \$0.075 base dividend and a \$0.075 variable dividend. The input row math supports source2: source1_return is -0.004730, source2_return is -0.002916, and diff_return is -0.001814. source1_div_split is cd:0.075, source2_div_split is ca:0.15, has_div_split_mismatch is true, source1_div_split_factor_explicit is 1.001816, and source2_div_split_factor_explicit is 1.003632. The missing \$0.075 component explains the negative diff_return, so source2 captures the full cash distribution while source1 captures only half.	source1 records a corporate-action event, but the event amount appears incomplete. source1 appears incorrect because it captured only part of the same-day corporate-action event, and the missing event-return piece explains the source1/source2 return difference. Correct the source1 event amount to include the full corporate-action distribution, then rebuild the adjusted close and adjusted return chain.	cd:0.075	ca:0.15	-0.00473	-0.002916
FCX	2024-04-12	HIGH	DISTRIBUTION	SOURCE1_PARTIAL_EVENT	Freeport-McMoRan \$0.15 cash dividend; source1 captures only \$0.075. StockAnalysis and CompaniesMarketCap both list Freeport-McMoRan's 04/12/2024 dividend as \$0.150. The input row math supports source2: source1_return is -0.023586, source2_return is -0.022139, and diff_return is -0.001448. source1_div_split is cd:0.075, source2_div_split is ca:0.15, has_div_split_mismatch is true, source1_div_split_factor_explicit is 1.001478, and source2_div_split_factor_explicit is 1.002956. The missing \$0.075 component explains the negative diff_return, so source2 captures the full cash distribution while source1 captures only half.	source1 records a corporate-action event, but the event amount appears incomplete. source1 appears incorrect because it captured only part of the same-day corporate-action event, and the missing event-return piece explains the source1/source2 return difference. Independent historical price sources support the source2 close for 2023-05-30, while source1's close appears shifted into the adjacent-day return calculation.	source1 close appears incorrect after an adjacent-day close reversal. source1 appears incorrect because independent evidence supports the source2 close, and the return difference reverses across adjacent trading days. Review and correct the source1 close for the affected date, then rebuild the adjusted close and adjusted return chain.			-0.032217	-0.019202
ULTA	2023-05-31	HIGH	PRICING_METHOD	CLOSE_REVERSAL	Adjacent-day close-reversal pricing error The 2023-05-30 and 2023-05-31 rows form an offsetting close-reversal pattern. Independent historical price sources support the source2 close for 2023-05-30, while source1's close appears shifted into the adjacent-day return calculation.	source1 close appears incorrect after an adjacent-day close reversal. source1 appears incorrect because independent evidence supports the source2 close, and the return difference reverses across adjacent trading days. Review and correct the source1 close for the affected date, then rebuild the adjusted close and adjusted return chain.			0.007622	-0.00575
ZBH	2022-03-01	HIGH	SPINOFF	SOURCE1_MISSING_EVENT	Zimmer Biomet ZimVie spin-off Zimmer Biomet completed the ZimVie spin-off on 2022-03-01, with shareholders receiving one ZimVie share for every ten Zimmer Biomet shares. Source2 includes a spin factor while source1 has no event.	source1 is missing the event/adjustment needed to explain the return difference. source1 appears incorrect because source2 and real-world event evidence support an event/adjustment that source1 did not capture. Add or correct the missing source1 dividend/split event, apply the appropriate adjustment factor, and rebuild the adjusted close and adjusted return chain.		sp:1.03	-0.02398	0.005301
