

Non-Actionable Audit Report Summary

ticker	date	massive fix priority	event bucket	analysis reason code	real world evidence	massive problem and fix	Massive ms_div_split	yFinance yf_div_split	Massive ms_return	yFinance yf_return
ALLE	2025-09-15		DISTRIBUTION	YF_MISSING_EVENT	\$0.51 Allegion quarterly cash dividend with September 15, 2025 record/ex-dividend treatment and September 30, 2025 payment. Allegion's investor dividend table lists a \$0.51 distribution with 09/15/2025 record date and 09/30/2025 payable date, and the 09/04/2025 company release states the board declared a \$0.51 quarterly dividend payable 09/30/2025 to shareholders of record 09/15/2025. The input row math supports Massive: ms_div_split records cd:0.51 while yFinance has no event marker, ms_return is 0.009684 versus yf_return 0.006742, and diff_return is +0.002942. Massive's explicit factor impact is 1.002914 - 1.0 = +0.002914, which reconciles to the positive Massive-minus-yFinance return gap within normal denominator/rounding tolerance. yFinance appears to omit the cash distribution adjustment for this row, so Massive is more economically correct.		cd:0.51		0.009684	0.006742
ALLE	2025-12-16		DISTRIBUTION	YF_MISSING_EVENT	\$0.51 Allegion quarterly cash dividend with December 16, 2025 record/ex-dividend treatment and December 31, 2025 payment. Allegion's investor dividend table lists a \$0.51 dividend declared 12/03/2025 with 12/16/2025 record date and 12/31/2025 payable date. MarketBeat independently reports Allegion's most recent quarterly payment of \$0.51 and the 12/16/2025 ex-dividend date. The input row math supports Massive: ms_div_split records cd:0.51 while yFinance has no event marker, ms_return is -0.017718 versus yf_return -0.020790, and diff_return is +0.003072. Massive's explicit factor impact is 1.003128 - 1.0 = +0.003128, which closely reconciles to the positive Massive-minus-yFinance return gap. yFinance appears to omit the dividend adjustment for this row, so Massive is more economically correct.		cd:0.51		-0.017718	-0.02079
ALLE	2026-02-17		NEWS	HIGH_SCORE_ANOMALY	Allegion Q4 and full-year 2025 earnings release and 2026 outlook on February 17, 2026, with a material same-day stock move. Allegion released Q4 and full-year 2025 results on 02/17/2026 and introduced 2026 guidance; the company reported full-year revenue growth, adjusted EPS of \$8.14 for 2025, and 2026 adjusted EPS guidance of \$8.70 to \$8.90. MarketBeat's earnings history shows the same 02/17/2026 Q4 2025 event and reports adjusted EPS of \$1.94 versus a \$2.01 consensus estimate. The input row math shows no vendor disagreement: ms_return and yf_return are both -0.093760, diff_return is blank, both event markers are blank, and both explicit dividend/split factors are 1.0. The high heuristic score is therefore a review trigger for a material earnings/news move, not				-0.09376	-0.09376

ticker	date	massive fix priority	event bucket	analysis reason code	real world evidence	massive problem and fix	Massive ms_div_split	yFinance yf_div_split	Massive ms_return	yFinance yf_return
					evidence that Massive or yFinance is wrong. Massive and yFinance are economically equivalent for this row.					
AMCR	2024-05-01		NEWS	HIGH_SCORE_ANOMALY	Amcor fiscal 2024 third-quarter results and raised adjusted EPS guidance announced after the prior close. Amcor reported fiscal 2024 third-quarter results on 04/30/2024 and raised fiscal 2024 adjusted EPS guidance. PR Newswire independently carried the same company release and reported that Amcor beat Q3 expectations and raised guidance. The input row math shows no vendor disagreement on 05/01/2024: ms_return and yf_return are both +0.096197, diff_return is blank, both event markers are blank, and both explicit dividend/split factors are 1.0. The high heuristic score is therefore consistent with a material post-earnings/news market move, not a Massive/yFinance reconciliation defect. Massive and yFinance are economically equivalent for this row.				0.096197	0.096197
AMCR	2025-08-14		NEWS	HIGH_SCORE_ANOMALY	Amcor Q4 and fiscal 2025 earnings release and fiscal 2026 outlook on August 14, 2025. Amcor released Q4 and fiscal 2025 results on 08/14/2025 and discussed fiscal 2026 earnings growth expectations, while MarketBeat's earnings report page independently identifies the same 08/14/2025 Q4 2025 earnings event. The input row math shows Massive and yFinance agree economically: ms_return and yf_return are both -0.118712, diff_return is blank, both event markers are blank, and both explicit dividend/split factors are 1.0. The review trigger is a high anomaly score for a material earnings/news move, not a vendor discrepancy. Massive and yFinance are economically equivalent for this row.				-0.118712	-0.118712
AMCR	2025-09-05		DISTRIBUTION	YF_MISSING_EVENT	Amcor quarterly cash dividend with September 5, 2025 ex/record date and September 25, 2025 payment; amounts differ by historical price scale after the later reverse split. StockAnalysis lists Amcor's 09/05/2025 dividend with \$0.6375 amount on its post-reverse-split adjusted scale, record date 09/05/2025, and pay date 09/25/2025. Alnvest independently reports Amcor announced a cash dividend of \$0.1275 per share with ex-dividend date 09/05/2025, matching the pre-split amount shown by Massive. The input row math supports Massive: ms_div_split records cd:0.1275, yFinance has no event marker, ms_return is +0.009425 versus yf_return -0.005988, and diff_return is +0.015413. Massive's explicit factor impact is 1.015269 - 1.0 = +0.015269, which reconciles to the positive return gap. yFinance appears to omit the dividend adjustment for this row, so Massive is more economically correct.		cd:0.1275		0.009425	-0.005988

ticker	date	massive fix priority	event bucket	analysis reason code	real world evidence	massive problem and fix	Massive ms_div_split	yFinance yf_div_split	Massive ms_return	yFinance yf_return
AMCR	2025-11-28		DISTRIBUTION	YF_MISSING_EVENT	Amcor quarterly cash dividend with November 28, 2025 ex/record date and December 17, 2025 payment; amounts differ by historical price scale after the later reverse split. StockAnalysis lists Amcor's 11/28/2025 dividend with \$0.650 amount on its post-reverse-split adjusted scale, record date 11/28/2025, and pay date 12/17/2025. Stock Events independently reports Amcor's latest dividend as \$0.13 with ex-dividend date 11/28/2025 and payment date 12/17/2025, matching the pre-split amount shown by Massive. The input row math supports Massive: ms_div_split records cd:0.13, yFinance has no event marker, ms_return is +0.003534 versus yf_return -0.011601, and diff_return is +0.015134. Massive's explicit factor impact is 1.015081 - 1.0 = +0.015081, which reconciles to the positive return gap. yFinance appears to omit the dividend adjustment for this row, so Massive is more economically correct.		cd:0.13		0.003534	-0.011601
BDX	2023-11-09		NEWS	HIGH_SCORE_ANOMALY	BD Q4 and full-year fiscal 2023 earnings release and negative market reaction on November 9, 2023. BD released Q4 and full-year fiscal 2023 results on 11/09/2023. Benzinga independently reported the same date's market reaction and noted BD traded lower after Q4 adjusted EPS slightly missed consensus. The input row math shows no Massive/yFinance discrepancy: ms_return and yf_return are both -0.092529, diff_return is blank, both event markers are blank, and both explicit dividend/split factors are 1.0. The high anomaly score is explained by earnings/news-related market movement, not by a corporate-action or vendor adjustment difference. Massive and yFinance are economically equivalent for this row.				-0.092529	-0.092529
BDX	2025-05-01		NEWS	HIGH_SCORE_ANOMALY	BD second-quarter fiscal 2025 earnings release, guidance update, and market reaction on May 1, 2025. BD released second-quarter fiscal 2025 results on 05/01/2025 and updated full-year guidance, including tariff and market-impact commentary. AllSides, summarizing market coverage, reported BD shares fell more than 15% after the company said global research-funding cuts were affecting research instrument sales. The input row math shows Massive and yFinance agree: ms_return and yf_return are both -0.181322, diff_return is blank, both event markers are blank, and both explicit dividend/split factors are 1.0. The very high anomaly score reflects a material earnings/news move, not a vendor data defect. Massive and yFinance are economically equivalent for this row.				-0.181322	-0.181322
BKR	2021-12-07		PRICING_METH OD	CLOSE_REVERSAL	No real-world corporate action or material company-specific event identified; adjacent-day return discrepancy appears to be pricing-method reversal.				0.029075	0.018837

ticker	date	massive fix priority	event bucket	analysis reason code	real world evidence	massive problem and fix	Massive ms_div_split	yFinance yf_div_split	Massive ms_return	yFinance yf_return
					No split, spin-off, merger, rights offering, or dividend event was identified for Baker Hughes on 2021-12-07. The SEC annual report provides the issuer context for the period, while historical price data shows ordinary trading rather than a corporate-action reset. The input row has no Massive or yFinance event marker, both explicit dividend/split factors are 1.0, and the discrepancy reverses the next day: Massive is higher by 0.010238 on 12/07 and lower by -0.009976 on 12/08. That pattern is economically consistent with a close/adjusted-close normalization or pricing-timing difference, not a lasting return difference. Both vendors are defensible.					
BKR	2021-12-08		PRICING_METHOD	CLOSE_REVERSAL	No real-world corporate action or material company-specific event identified; row completes the adjacent-day pricing-method reversal from December 7, 2021. No split, spin-off, merger, rights offering, or dividend event was identified for Baker Hughes on 2021-12-08. The SEC annual report provides the issuer context for the period, while historical price data shows ordinary trading rather than a corporate-action reset. The input row has no vendor event marker and both explicit dividend/split factors are 1.0. The negative diff_return of -0.009976 offsets the prior day's positive 0.010238 difference, which is the expected signature of a close reversal rather than a persistent economic discrepancy. Both vendors are defensible.				-0.007163	0.002814
BKR	2024-10-14		UNKNOWN	CLOSE_REVERSAL	No material real-world event identified for Baker Hughes on October 14, 2024. No same-day Baker Hughes corporate action or material company-specific catalyst was identified for 2024-10-14. The next major company earnings release occurred on 2024-10-22, and historical price data shows ordinary trading in the surrounding period. The input row has no vendor event marker, both explicit dividend/split factors are 1.0, and the return difference is only -0.000133, with close and adjusted-close values differing only by tiny rounding-level amounts. The row appears to be a benign review trigger, so Massive and yFinance are economically equivalent for audit purposes.				-0.001724	-0.001591
BKR	2024-10-15		UNKNOWN	CLOSE_REVERSAL	No material real-world event identified for Baker Hughes on October 15, 2024. No same-day Baker Hughes corporate action or material company-specific catalyst was identified for 2024-10-15. The next major company earnings release occurred on 2024-10-22, and historical price data shows ordinary trading in the surrounding period. The input row has no vendor event marker, both explicit dividend/split factors are 1.0, and the return difference is only 0.000128 after a similarly tiny opposite-sign difference on the prior day. This is not				-0.034941	-0.035069

ticker	date	massive fix priority	event bucket	analysis reason code	real world evidence	massive problem and fix	Massive ms_div_split	yFinance yf_div_split	Massive ms_return	yFinance yf_return
					an actionable reconciliation issue; Massive and yFinance are economically equivalent for audit purposes.					
BKR	2024-11-06		NEWS	HIGH_SCORE_ANOMALY	Broad post-election market rally on November 6, 2024, with Baker Hughes participating in the risk-on move. Baker Hughes had a material positive move on 2024-11-06, but the input row shows no vendor disagreement: ms_return and yf_return are both 0.107828, diff_return is blank, both explicit factors are 1.0, and the close/adjusted-close values are economically identical. Market coverage reported a broad post-election equity rally after the U.S. presidential election result became clear, and Reuters/Investing.com described stocks rallying sharply on the same date. The event explains the anomaly score as market/news movement, not a corporate-action or adjustment-factor issue. Both vendors are economically equivalent.				0.107828	0.107828
BKR	2024-11-08		UNKNOWN	CLOSE_REVERSAL	No material Baker Hughes event identified for November 8, 2024; the relevant dividend schedule does not explain a vendor difference. No split, spin-off, merger, rights offering, or material company-specific catalyst was identified for 2024-11-08. Baker Hughes' relevant quarterly dividend had a November 4 record date and November 14 payment date, not an event date matching this row. The input row has no vendor event marker, both explicit dividend/split factors are 1.0, and the return difference is only -0.000116 with close and adjusted-close values nearly identical. The row appears to be a benign review trigger after the larger November market move; Massive and yFinance are economically equivalent for audit purposes.				-0.001972	-0.001856
BKR	2024-11-11		UNKNOWN	CLOSE_REVERSAL	No material Baker Hughes event identified for November 11, 2024; the row appears to be a small non-actionable vendor rounding/timing artifact. No split, spin-off, merger, rights offering, or material company-specific catalyst was identified for 2024-11-11. Baker Hughes' relevant quarterly dividend had a November 4 record date and November 14 payment date, so it does not reconcile to this row as a same-day vendor adjustment. The input row has no vendor event marker, both explicit dividend/split factors are 1.0, and the return difference is only 0.000119 after a tiny opposite-sign difference on 11/08. Massive and yFinance are economically equivalent for audit purposes.				0.025456	0.025337
BKR	2025-07-23		NEWS	HIGH_SCORE_ANOMALY	Baker Hughes second-quarter 2025 earnings release and positive market reaction on July 23, 2025. Baker Hughes released second-quarter 2025 results after the close on 2025-07-22 and held its investor				0.116442	0.116442

ticker	date	massive fix priority	event bucket	analysis reason code	real world evidence	massive problem and fix	Massive ms_div_split	yFinance yf_div_split	Massive ms_return	yFinance yf_return
					call on 2025-07-23. The release reported adjusted EPS of \$0.63, adjusted EBITDA up year-over-year, and updated segment guidance; MarketBeat separately reported BKR trading higher after strong earnings. The input row shows no vendor disagreement: ms_return and yf_return are both 0.116442, diff_return is blank, both explicit dividend/split factors are 1.0, and prices are economically identical. The high anomaly score is explained by earnings/news reaction, not a vendor adjustment issue. Both vendors are economically equivalent.					
BKR	2025-08-28		UNKNOWN	CLOSE_REVERSAL	No material Baker Hughes event identified for August 28, 2025; the row appears to be a small non-actionable review trigger. No split, spin-off, merger, rights offering, or material company-specific catalyst was identified for 2025-08-28. Baker Hughes' relevant quarterly dividend was payable on August 15 to holders of record on August 5, so it does not reconcile to this late-August row. The input row has no vendor event marker, both explicit dividend/split factors are 1.0, and the return difference is only -0.000112. Subsequent market commentary around August 29 described ordinary trading movement and business-news context rather than a corporate action. Massive and yFinance are economically equivalent for audit purposes.				0.01753	0.017642
BKR	2025-08-29		UNKNOWN	CLOSE_REVERSAL	No material Baker Hughes event identified for August 29, 2025; the row appears to be a small non-actionable vendor rounding/timing artifact. No split, spin-off, merger, rights offering, or material company-specific catalyst was identified for 2025-08-29. Baker Hughes' relevant quarterly dividend was payable on August 15 to holders of record on August 5, so it does not explain this row. Independent market commentary reported BKR declined only modestly on August 29 while discussing ordinary business-news context, not a corporate action. The input row has no vendor event marker, both explicit dividend/split factors are 1.0, and the return difference is only 0.000109 after a tiny opposite-sign difference on the prior day. Massive and yFinance are economically equivalent for audit purposes.				-0.003621	-0.00373
BWA	2023-11-02		NEWS	HIGH_SCORE_ANOMALY	BorgWarner third-quarter 2023 earnings release and negative market reaction on November 2, 2023. BorgWarner released third-quarter 2023 results on 2023-11-02. Benzinga independently reported that BWA shares traded lower by around 11% after the company reported Q3 results. The input row shows no vendor disagreement: ms_return and yf_return are both -0.130693, diff_return is blank, both explicit dividend/split factors are 1.0, and close/adjusted-close values are economically identical. The high anomaly score is explained by earnings/news reaction, not by a				-0.130693	-0.130693

ticker	date	massive fix priority	event bucket	analysis reason code	real world evidence	massive problem and fix	Massive ms_div_split	yFinance yf_div_split	Massive ms_return	yFinance yf_return
					corporate-action or vendor adjustment difference. Both vendors are economically equivalent.					
BWA	2026-02-11		NEWS	HIGH_SCORE_ANOMALY	BorgWarner fourth-quarter 2025 earnings beat and 2026 guidance release on February 11, 2026. BorgWarner reported fourth-quarter and full-year 2025 results on 2026-02-11, including adjusted EPS of \$1.35 and 2026 guidance. Zacks independently reported that Q4 earnings beat expectations and revenue rose year over year. The input row shows no vendor disagreement: ms_return and yf_return are both 0.224528, diff_return is blank, both explicit dividend/split factors are 1.0, and close/adjusted-close values are economically identical. The high anomaly score is explained by earnings/news reaction, not by a vendor adjustment issue. Both vendors are economically equivalent.				0.224528	0.224528
CB	2025-09-12		DISTRIBUTION	YF_MISSING_EVENT	Chubb \$0.97 quarterly dividend with September 12, 2025 record/ex-dividend date. Chubb declared a quarterly dividend of \$0.97 per share payable on 2025-10-03 to shareholders of record at the close of business on 2025-09-12; StockAnalysis independently lists the same 2025-09-12 ex-dividend/record date and \$0.97 amount. The row's Massive factor is 1.003429 while yFinance remains 1.0, and diff_return is 0.003383. The expected cash-dividend impact is approximately dividend divided by prior price, matching the row's 0.003429 distribution_return. Massive reconciles to the confirmed dividend while yFinance appears to omit the event adjustment.		cd:0.97		-0.013514	-0.016897
CB	2025-12-12		DISTRIBUTION	YF_MISSING_EVENT	Chubb \$0.97 quarterly dividend with December 12, 2025 record/ex-dividend date. Chubb's November 20, 2025 dividend announcement states the board declared a \$0.97 quarterly dividend payable January 2, 2026 to shareholders of record at the close of business on December 12, 2025; StockAnalysis independently lists the same 2025-12-12 ex-dividend/record date and \$0.97 amount. The row's Massive factor is 1.00317 while yFinance remains 1.0, and diff_return is 0.003206. The expected cash-dividend impact is approximately dividend divided by prior price, matching the row's 0.00317 distribution_return. Massive reconciles to the confirmed dividend while yFinance appears to omit the event adjustment.		cd:0.97		0.011344	0.008138
CMCSA	2021-09-14		NEWS	HIGH_SCORE_ANOMALY	Comcast shares fell after management warned of slowing broadband subscriber growth on September 14, 2021. Comcast's September 14, 2021 drop was tied to management commentary about slowing broadband subscriber growth. Next TV reported that Comcast shares fell more than 7% after CFO Mike Cavanagh				-0.073037	-0.073036

ticker	date	massive fix priority	event bucket	analysis reason code	real world evidence	massive problem and fix	Massive ms_div_split	yFinance yf_div_split	Massive ms_return	yFinance yf_return
					warned at an investor conference that high-speed internet subscriber growth was expected to slow in Q3, and The Motley Fool independently covered the same day selloff. The input row shows no vendor disagreement: ms_return and yf_return are effectively identical, diff_return is blank, and both explicit dividend/split factors are 1.0. The high anomaly score is explained by market reaction to broadband-growth news, not by a vendor adjustment issue. Both vendors are economically equivalent.					
CMCSA	2024-03-12		UNKNOWN	CLOSE_REVERSAL	No material Comcast event identified for March 12, 2024; tiny discrepancy reverses the next trading day. No same-day Comcast corporate action or material catalyst was identified for 2024-03-12. Comcast's dividend history does not show an ex-dividend event on this date, and the company earnings archive places regular earnings releases away from this row. The input row has no vendor event marker, both explicit dividend/split factors are 1.0, and diff_return is only -0.000115, reversing on the next day. This is a benign close/adjusted-close timing or rounding artifact, and both vendors are economically equivalent for audit purposes.				-0.008153	-0.008038
CMCSA	2024-03-13		UNKNOWN	CLOSE_REVERSAL	No material Comcast event identified for March 13, 2024; row completes a tiny adjacent-day close reversal. No same-day Comcast corporate action or material catalyst was identified for 2024-03-13. Comcast's dividend history does not show an ex-dividend event on this date, and the company earnings archive places regular earnings releases away from this row. The input row has no vendor event marker, both explicit dividend/split factors are 1.0, and diff_return is only 0.000116, offsetting the prior day's small opposite-sign difference. This is a benign close/adjusted-close timing or rounding artifact, and both vendors are economically equivalent for audit purposes.				0.0022	0.002084
CMCSA	2024-10-22		UNKNOWN	CLOSE_REVERSAL	No material Comcast event identified for October 22, 2024; tiny discrepancy appears non-actionable. No same-day Comcast corporate action or material catalyst was identified for 2024-10-22. Comcast's dividend history does not show an ex-dividend event on this date, and the company earnings archive does not indicate a same-day earnings release. The input row has no vendor event marker, both explicit dividend/split factors are 1.0, and diff_return is only -0.000123, reversing on the following row. This is not an actionable reconciliation issue; both vendors are economically equivalent.				0.025043	0.025167
CMCSA	2024-10-23		UNKNOWN	CLOSE_REVERSAL	No material Comcast event identified for October 23, 2024; row completes a tiny adjacent-day close reversal.				0.00012	0.0

ticker	date	massive fix priority	event bucket	analysis reason code	real world evidence	massive problem and fix	Massive ms_div_split	yFinance yf_div_split	Massive ms_return	yFinance yf_return
					No same-day Comcast corporate action or material catalyst was identified for 2024-10-23. Comcast's dividend history does not show an ex-dividend event on this date, and the company earnings archive does not indicate a same-day earnings release. The input row has no vendor event marker, both explicit dividend/split factors are 1.0, and diff_return is only 0.00012, offsetting the prior day's small opposite-sign difference. Massive and yFinance are economically equivalent for audit purposes.					
CMCSA	2024-12-09		NEWS	HIGH_SCORE_ANOMALY	Comcast shares tumbled after management warned of Q4 broadband subscriber losses and intense competition on December 9, 2024. Comcast shares fell sharply on 2024-12-09 after Comcast Cable CEO Dave Watson told investors that the company expected to lose more than 100,000 broadband subscribers in Q4 and described the broadband market as intensely competitive. CNBC reported the shares fell nearly 10% after the remarks, and StockStory independently covered the same stock move. The input row shows no vendor disagreement: ms_return and yf_return are both -0.095017, diff_return is blank, and both explicit factors are 1.0. The high anomaly score is explained by news/management commentary, not by a vendor adjustment difference.				-0.095017	-0.095017
CMCSA	2025-01-30		NEWS	HIGH_SCORE_ANOMALY	Comcast fourth-quarter 2024 earnings release and negative broadband-loss reaction on January 30, 2025. Comcast reported fourth-quarter 2024 results on 2025-01-30. CNBC independently reported that the stock fell as investors focused on bigger-than-expected broadband customer losses and management's shift toward mobile bundling. The input row shows no vendor disagreement: ms_return and yf_return are both -0.110011, diff_return is blank, and both explicit dividend/split factors are 1.0. The high anomaly score is explained by earnings/news reaction, not by corporate-action math or a vendor adjustment issue. Both vendors are economically equivalent.				-0.110011	-0.110011
CMCSA	2025-10-31		UNKNOWN	CLOSE_REVERSAL	No Comcast corporate-action issue identified for October 31, 2025; tiny vendor difference appears non-actionable. Comcast reported third-quarter 2025 results on 2025-10-30, but no same-day corporate action or vendor-specific adjustment was identified for 2025-10-31. The input row has no vendor event marker, both explicit dividend/split factors are 1.0, and diff_return is only -0.000183, reversing on the next row. Any ordinary post-earnings trading context does not create a vendor reconciliation issue here; Massive and yFinance are economically equivalent for audit purposes.				0.018851	0.019034

ticker	date	massive fix priority	event bucket	analysis reason code	real world evidence	massive problem and fix	Massive ms_div_split	yFinance yf_div_split	Massive ms_return	yFinance yf_return
CMCSA	2025-11-03		UNKNOWN	CLOSE_REVERSAL	No Comcast corporate-action issue identified for November 3, 2025; row completes a tiny adjacent-day reversal. Comcast reported third-quarter 2025 results on 2025-10-30, but no same-day corporate action or vendor-specific adjustment was identified for 2025-11-03. The input row has no vendor event marker, both explicit dividend/split factors are 1.0, and diff_return is only 0.000174, offsetting the prior trading day's tiny opposite-sign difference. This looks like a benign close/adjusted-close timing artifact rather than an economic disagreement. Both vendors are economically equivalent.				-0.030717	-0.030891
CMCSA	2026-04-24		NEWS	HIGH_SCORE_ANOMALY	Comcast first-quarter 2026 earnings reaction and analyst downgrade/broadband concerns on April 24, 2026. Comcast reported first-quarter 2026 results on 2026-04-23, including lower adjusted net income, adjusted EBITDA, adjusted EPS, operating cash flow, and free cash flow year over year. The Motley Fool independently reported that CMCSA dropped nearly 13% on 2026-04-24 after the earnings release and an analyst downgrade tied partly to broadband competition. The input row shows no vendor disagreement: ms_return and yf_return are both -0.128951, diff_return is blank, both explicit dividend/split factors are 1.0, and prices are economically identical. The high anomaly score is explained by earnings/news reaction, not by a vendor adjustment issue.				-0.128951	-0.128951
ETN	2024-02-01		NEWS	HIGH_SCORE_ANOMALY	Eaton fourth-quarter 2023 earnings release and positive market reaction on February 1, 2024. Eaton reported record fourth-quarter 2023 results on 2024-02-01, including record adjusted EPS, record quarterly sales, strong backlog growth, and 2024 guidance. StreetInsider independently carried the same release. The input row shows no vendor disagreement: ms_return and yf_return are both 0.075138, diff_return is blank, and both explicit dividend/split factors are 1.0. The high anomaly score is explained by earnings/news reaction, not by a corporate-action or vendor adjustment issue. Both vendors are economically equivalent.				0.075138	0.075138
ETN	2025-01-27		NEWS	HIGH_SCORE_ANOMALY	DeepSeek-related selloff in AI and data-center infrastructure stocks, including Eaton, on January 27, 2025. Eaton's 2025-01-27 selloff occurred during the DeepSeek-driven AI infrastructure selloff. CNBC reported a broad technology and AI-linked selloff sparked by concerns over DeepSeek, and Invezz specifically reported that Eaton, as a major electrical infrastructure provider, fell sharply with other AI data-				-0.155645	-0.155645

					center exposed manufacturing stocks. The input row shows no vendor disagreement: ms_return and yf_return are both -0.155645, diff_return is blank, and both explicit dividend/split factors are 1.0. The high anomaly score is explained by market/news reaction, not by a vendor adjustment issue. Both vendors are economically equivalent.					
ETN	2025-11-05		DISTRIBUTION	MS_EVENT_DATE_MISMATCH	Eaton \$1.04 quarterly dividend; yFinance appears to apply the adjustment one day before the supported November 6, 2025 event date. Eaton declared a \$1.04 quarterly dividend payable 2025-11-21 to shareholders of record at the close of business on 2025-11-06. SlickCharts lists the \$1.04 dividend with a 2025-11-06 ex-dividend date. The row shows yFinance applying a 1.002753 factor on 2025-11-05 while Massive remains 1.0. Because the authoritative company record date is 2025-11-06 and the confirming dividend calendar places the ex-date on 2025-11-06, the yFinance adjustment appears one trading day early. Massive better reconciles to the confirmed timing.			ca:1.04	0.020438	0.023256
ETN	2025-11-06		DISTRIBUTION	YF_EVENT_DATE_MISMATCH	Eaton \$1.04 quarterly dividend with November 6, 2025 record/ex-dividend timing. Eaton declared a \$1.04 quarterly dividend payable 2025-11-21 to shareholders of record at the close of business on 2025-11-06. SlickCharts independently lists the \$1.04 dividend with a 2025-11-06 ex-dividend date. The row shows Massive applying a 1.002698 factor on 2025-11-06 while yFinance is 1.0, and diff_return is 0.002649. The expected cash-dividend impact is approximately \$1.04 divided by the prior price, matching Massive's event factor. Massive reconciles to the confirmed dividend timing while yFinance appears to have shifted the adjustment to the prior day.		cd:1.04		-0.01821	-0.020859
EXC	2023-05-30		PRICING_METH OD	CLOSE_REVERSAL	No material Exelon event identified for May 30, 2023; discrepancy reverses the next day. No same-day Exelon corporate action or material catalyst was identified for 2023-05-30. Exelon's dividend history shows the relevant May 2023 dividend ex-date was 2023-05-12, not this row, and both sources show no dividend event on 2023-05-30. The input row has no vendor event marker, both explicit dividend/split factors are 1.0, and the 0.001904 return difference reverses almost exactly on 2023-05-31. This is consistent with a close/adjusted-close pricing-method timing difference rather than an economic disagreement. Both vendors are defensible.				0.000635	-0.001269
EXC	2023-05-31		PRICING_METH OD	CLOSE_REVERSAL	No material Exelon event identified for May 31, 2023; row completes the adjacent-day pricing-method reversal. No same-day Exelon corporate action or material				0.005962	0.00788

					No same-day Merck corporate action or material catalyst was identified for 2023-05-31. Merck's dividend history shows no dividend event on this date, and both explicit vendor factors are 1.0. The row's -0.008452 diff_return offsets the prior day's 0.008283 difference, which indicates a close/adjusted-close pricing-method reversal rather than a persistent vendor correctness issue. Both vendors are defensible.					
MRK	2024-07-30		NEWS	HIGH_SCORE_ANOMALY	Merck fell after Q2 2024 results highlighted lower Gardasil shipments in China on 2024-07-30. Merck reported second-quarter 2024 results on 2024-07-30 and disclosed that Gardasil growth was largely offset by lower China sales due to shipment timing. Reuters reported that concern over Gardasil shipments in China drove Merck shares down more than 9%. The input row shows no vendor disagreement: Massive and yFinance returns are both -0.098059 and both explicit dividend/split factors are 1.0. The high anomaly score is explained by an earnings/news reaction, not by a vendor adjustment issue. Both vendors are economically equivalent.				-0.098059	-0.098059
PWR	2023-05-30		PRICING_METH OD	CLOSE_REVERSAL	No material Quanta Services event identified for May 30, 2023; discrepancy reverses the next day. No same-day Quanta Services corporate action or material catalyst was identified for 2023-05-30. Quanta's dividend history shows the nearby 2023 dividend ex-dates were 2023-04-06 and 2023-06-30, not this row, and historical price context does not indicate a split, spin-off, or distribution. The input row has no vendor event marker, both explicit dividend/split factors are 1.0, and the -0.009971 return difference reverses substantially on 2023-05-31. This is consistent with a close/adjusted-close pricing-method artifact rather than an economic disagreement. Both vendors are defensible.				0.031236	0.041207
PWR	2023-05-31		PRICING_METH OD	CLOSE_REVERSAL	No material Quanta Services event identified for May 31, 2023; row completes the adjacent-day pricing reversal. No same-day Quanta Services corporate action or material catalyst was identified for 2023-05-31. Quanta's dividend history shows no dividend event on this date, and both explicit vendor factors are 1.0. The row's 0.009478 diff_return offsets the prior day's -0.009971 difference, which indicates an adjacent close/adjusted-close pricing reversal rather than a persistent vendor correctness issue. Both vendors are defensible.				-0.010338	-0.019816
PWR	2025-01-27		NEWS	HIGH_SCORE_ANOMALY	Quanta Services sold off with AI infrastructure and power-related stocks during the DeepSeek market reaction on 2025-01-27.				-0.183225	-0.183225

ticker	date	massive fix priority	event bucket	analysis reason code	real world evidence	massive problem and fix	Massive ms_div_split	yFinance yf_div_split	Massive ms_return	yFinance yf_return
					CNBC reported that DeepSeek's low-cost AI model sparked a broad technology selloff on 2025-01-27 and that the concern rippled into power and data-center demand beneficiaries. CNBC separately reported that power-related stocks plunged as investors questioned AI energy needs. Quanta is exposed to electric power and infrastructure demand, so the material PWR decline is economically consistent with this market-wide AI infrastructure repricing. The input row shows no vendor disagreement: Massive and yFinance returns are both -0.183225 and both explicit dividend/split factors are 1.0. Both vendors are economically equivalent.					
PWR	2026-04-30		NEWS	HIGH_SCORE_ANOMALY	Quanta Services rallied after strong Q1 2026 results and increased 2026 expectations on 2026-04-30. Quanta Services reported first-quarter 2026 results on 2026-04-30, including record first-quarter revenue, adjusted EPS of \$2.68, record backlog, and increased 2026 financial expectations. Zacks independently reported that PWR beat earnings estimates and raised its 2026 view. The input row shows no vendor disagreement: Massive and yFinance returns are both 0.157763 and both explicit dividend/split factors are 1.0. The high anomaly score is explained by earnings/news reaction, not by a vendor adjustment issue. Both vendors are economically equivalent.				0.157763	0.157763
QCOM	2021-11-04		NEWS	HIGH_SCORE_ANOMALY	Qualcomm rallied after fiscal Q4 2021 earnings beat expectations on 2021-11-04. Qualcomm reported fiscal fourth-quarter 2021 results after the 2021-11-03 close, including adjusted EPS of \$2.55 and revenue of \$9.3 billion, and CNBC reported QCOM closed up almost 13% on 2021-11-04 after the earnings beat and 56% year-over-year chip sales growth. The input row shows no vendor disagreement: Massive and yFinance returns are both 0.127311 and both explicit dividend/split factors are 1.0. The high anomaly score is explained by earnings/news reaction, not by a vendor adjustment issue. Both vendors are economically equivalent.				0.127311	0.127311
QCOM	2023-05-30		PRICING_METH OD	CLOSE_REVERSAL	No material Qualcomm event identified for May 30, 2023; discrepancy reverses the next day. No same-day Qualcomm corporate action or material catalyst was identified for 2023-05-30. Qualcomm's dividend history shows the relevant dividend ex-date was 2023-05-31, not this row, and the input row has no vendor event marker with both explicit dividend/split factors at 1.0. The -0.010557 return difference reverses substantially on 2023-05-31, which is consistent with a close/adjusted-close pricing-method artifact rather than an economic disagreement. Both vendors are defensible.				0.040643	0.051201

ticker	date	massive fix priority	event bucket	analysis reason code	real world evidence	massive problem and fix	Massive ms_div_split	yFinance yf_div_split	Massive ms_return	yFinance yf_return
QCOM	2023-05-31		DISTRIBUTION	CLOSE_REVERSAL	Qualcomm \$0.80 quarterly cash dividend went ex-dividend on 2023-05-31. Dividend-history sources identify a Qualcomm \$0.80 cash dividend with 2023-05-31 ex-dividend date and 2023-06-22 payment date. The input row math shows both vendors captured the dividend adjustment: Massive factor 1.006967 and yFinance factor 1.006897 are economically aligned, with only a tiny factor difference. The row's 0.010057 diff_return mostly offsets the prior day's -0.010557 difference, so the remaining issue is an adjacent pricing-method reversal around a real dividend event, not a vendor failure. Both vendors are defensible.		cd:0.8	ca:0.8	-0.005481	-0.015538
QCOM	2025-04-09		NEWS	HIGH_SCORE_ANOMALY	Qualcomm rallied with the broader market after the April 9, 2025 tariff-pause announcement. NPR and Axios reported that U.S. stocks surged on 2025-04-09 after President Trump announced a 90-day pause on many reciprocal tariffs, reversing a sharp tariff-driven selloff. Qualcomm is a semiconductor company with global supply-chain and end-market tariff exposure, so the material QCOM rally is economically consistent with this broad market relief move. The input row shows no vendor disagreement: Massive and yFinance returns are both 0.151853 and both explicit dividend/split factors are 1.0. Both vendors are economically equivalent.				0.151853	0.151853
QCOM	2025-10-27		NEWS	HIGH_SCORE_ANOMALY	Qualcomm rallied after announcing AI200 and AI250 data-center AI chips on 2025-10-27. Qualcomm announced new AI200 and AI250 data-center AI chips on 2025-10-27, and Axios reported the chips were intended to compete with Nvidia and AMD for AI-related tasks. Yahoo Finance reported QCOM closed up 11% after the announcement. The input row shows no vendor disagreement: Massive and yFinance returns are both 0.110927 and both explicit dividend/split factors are 1.0. The high anomaly score is explained by product/AI news, not by a vendor adjustment issue. Both vendors are economically equivalent.				0.110927	0.110927
QCOM	2026-04-30		NEWS	HIGH_SCORE_ANOMALY	Qualcomm rallied after fiscal Q2 2026 results, buyback authorization, and positive AI/data-center commentary on 2026-04-30. Qualcomm announced fiscal second-quarter 2026 results after the 2026-04-29 close, including revenue of \$10.6 billion, non-GAAP EPS of \$2.65, record QCT automotive revenue, and a new \$20 billion buyback authorization. Reuters reported on 2026-04-30 that QCOM shares jumped as investors focused on smartphone recovery and data-center opportunities despite weaker forecast concerns. The input row shows no vendor disagreement: Massive and yFinance returns are both 0.151154 and both explicit				0.151154	0.151154

ticker	date	massive fix priority	event bucket	analysis reason code	real world evidence	massive problem and fix	Massive ms_div_split	yFinance yf_div_split	Massive ms_return	yFinance yf_return
					dividend/split factors are 1.0. Both vendors are economically equivalent.					
STE	2023-02-09		NEWS	HIGH_SCORE_ANOMALY	STERIS fell after fiscal Q3 2023 results and updated fiscal 2023 guidance on 2023-02-09. STERIS announced fiscal 2023 third-quarter results after the 2023-02-08 close and updated fiscal 2023 guidance, including lower expected revenue growth than prior expectations. The Motley Fool independently reported that the stock sold off during the week after the quarterly figures and guidance update. The input row shows no vendor disagreement: Massive and yFinance returns are both -0.108918 and both explicit dividend/split factors are 1.0. The high anomaly score is explained by earnings/news reaction, not by a vendor adjustment issue. Both vendors are economically equivalent.				-0.108918	-0.108918
STE	2025-11-18		DISTRIBUTION	YF_MISSING_EVENT	STERIS \$0.63 quarterly cash dividend went ex-dividend on 2025-11-18. STERIS announced a \$0.63 quarterly dividend payable on 2025-12-18 to shareholders of record at the close of business on 2025-11-18, and dividend-history data identifies 2025-11-18 as the ex-dividend date. The input row math shows Massive applying a 1.002451 explicit factor while yFinance applies 1.0; the 0.002457 return difference reconciles to yFinance missing the cash distribution adjustment. Massive is more likely correct.		cd:0.63		0.002418	-3.9e-05
T	2021-07-08		DISTRIBUTION	EVENT_DENOMINATOR_MISMATCH	AT&T \$0.52 quarterly cash dividend went ex-dividend on 2021-07-08. AT&T historical dividend records and market dividend-history data confirm a \$0.52 quarterly cash dividend around the 2021-07-08 ex-dividend date. The input row math shows both Massive and yFinance applying dividend factors greater than 1.0, but the factors differ because they are using different denominator bases after later AT&T/WBD history normalization. This is an event-denominator mismatch around a real cash distribution, not a missing-event failure by either vendor. Both vendors are economically defensible.		cd:0.52	ca:0.52	-0.008096	-0.002178
T	2021-10-07		DISTRIBUTION	EVENT_DENOMINATOR_MISMATCH	AT&T \$0.52 quarterly cash dividend went ex-dividend on 2021-10-07. AT&T historical dividend records and market dividend-history data confirm a \$0.52 quarterly cash dividend around the 2021-10-07 ex-dividend date. The input row math shows both Massive and yFinance applying dividend factors greater than 1.0, but the factors differ because the vendors use different denominator bases after later AT&T/WBD history normalization. This is an event-denominator mismatch around a real cash distribution, not a missing-event failure by either vendor. Both vendors are economically defensible.		cd:0.52	ca:0.52	0.011198	0.017598
